

## Description

# TITLE: Fuel Free and Self Powered Generator

### DETAILED DESCRIPTION

- [0001] The invention of this generator consists of 12 volts car generator, a 12 volts mowing tractor battery, and a 12 volts DC electric motor,. On the board is attached an On/Off switch, a car cigarette lighter, and a power inverter to provide 120V AC current to run appliances or powered tools.
- [0002] When the On/Off switch is turned on the 12 volts DC motor ,witch is attached directly to the generator ,will run the generator to generate electricity,. The generator supplies the power to charge the battery, run the motor, and supply the power for the power inverter.
- [0003] The power provided for the 12 volts DC electric motor, is wired to a negative and positive battery terminal. Between the positive battery terminal and the motor is an On/Off switch. Te generator is wired to the negative and positive

battery terminal to maintain a fully charged battery, and the generator also has another negative and positive connection, which runs to the cigarette lighter, that supplies power to the inverter.
